# 1 System Installation Diagram

## 1.1 Building System Wiring Diagram

## 1.2 Multi-storey Wiring Diagram

### System Diagram With PoE

**Note:** Optional for POE function Outdoor station not need extra power supply when with built-in POE function.

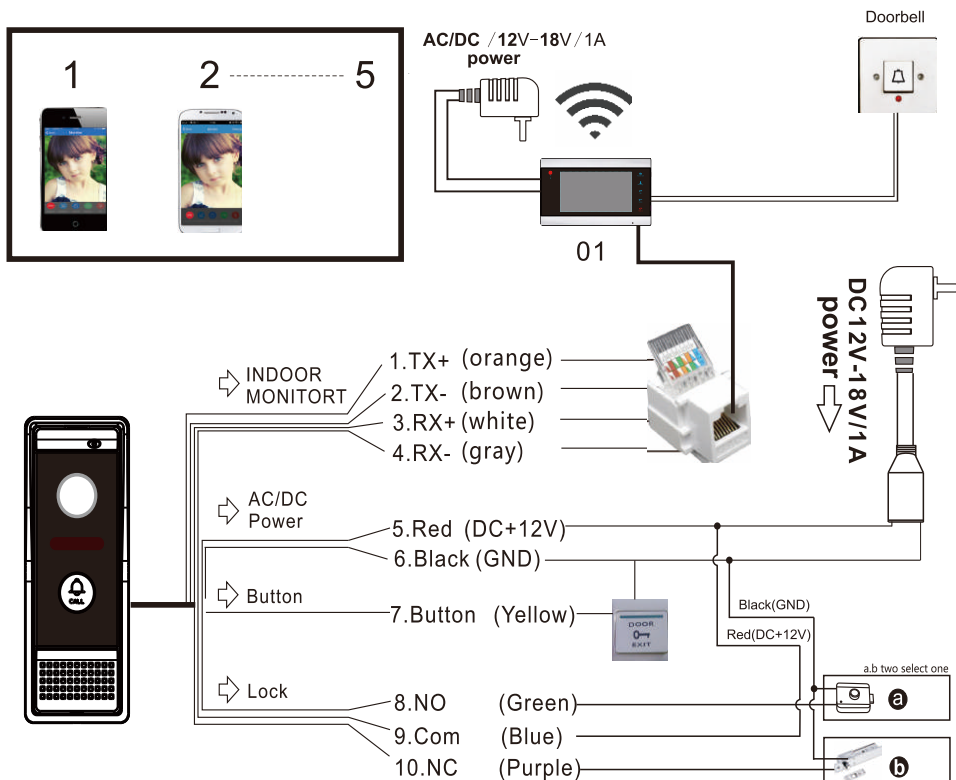

### 1.3 Villa System Wiring Diagram

## Miltple Devices

**Note:** Support PoE Function if use PoE splitter in outdoor station.

## One to One

**Note:** Support PoE Function if use PoE splitter in outdoor station.

# 1.4 Indoor Monitor Diagram

## Type A indoor monitor diagram

## 2 Home Page

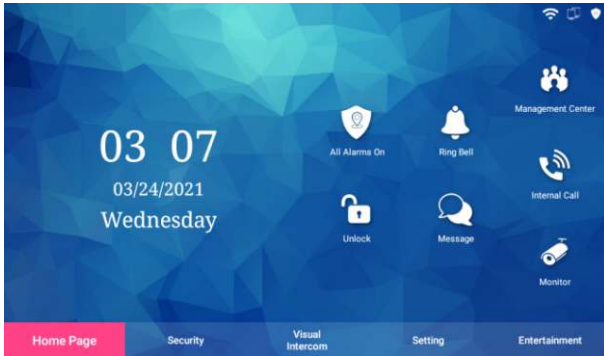

### (1)Function description

The system will automatically enter the home page after startup, including three modules: status display, menu items shortcut keys.

- ①. **Status display:** The left side of the interface displays the current date and time, and the top right corner displays the network status and security status.
- ②. **Menu:** including Home Page, Security, Visual intercom, Setting, Entertainment, users can switch to different function page
- ③. **Shortcut keys:** ring bell, monitor, message, all alarms on, management center, unlock and internal call

## (2). User interface

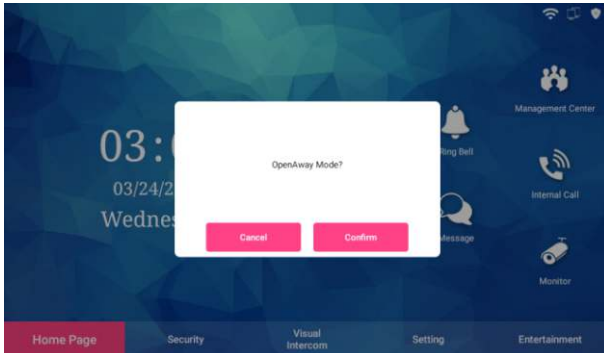

### 2.1 All alarms on

#### (1). Function description

Users can turn on all alarms

#### (2). User interface

#### (3). Steps

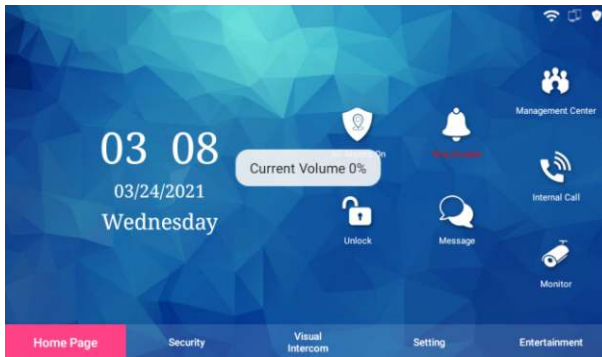

- ①. Click “all alarms on”
- ②. The indoor monitor will prompt : Open away mode?
- ③. Fafter clicking confirm, it will finish arming after 30 seconds and enter the away from home mode.

## 2.2 Ring bell

### (1). Function description

User can choose whether to turn on the ringtone. After turning off the ringtone, all incoming calls will be muted.

### (2). User interface

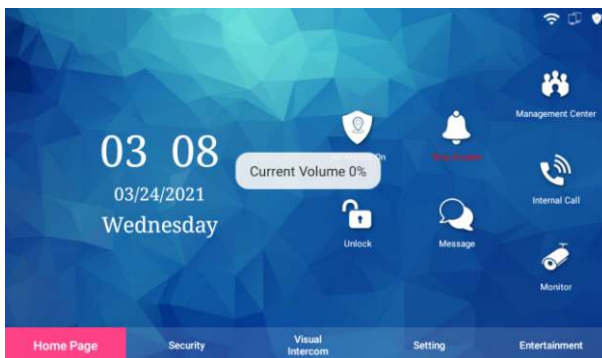

## 2.3 Management Center

### (1). Function description

Users can call management center, users can adjust the volume after connecting , and can also hang up the call at any time.

### (2). user interface

## 2.4 Internal Call

### (1). Function description

User can call other residents in the same community.

### (2). User interface

### (3). Steps

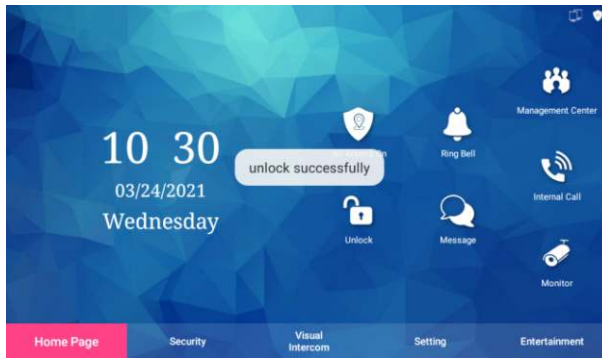

- ①. Click “internal call”, enter the interface to dialogue the room number.
- ②. After entering the room number you want to call, click Call to call.
- ③. After the call is connected, the volume of the call can be adjusted, and the call can be hung up at any time.
- ④. After ending the call, you can see the recent call record on the interface of entering the call room number, and you can click any recent call to make a quick call.

## 2.5 Unlock

### (1). Function description

Click to open the door corresponding to the location of the indoor monitor room number.

### (2). user interface

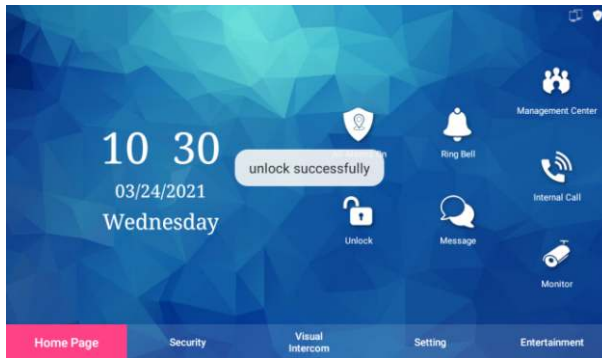

## 2.6 Message

### (1). Function description

You can view the personal information or community information issued by the property.

### (2). user interface

### (3). Steps

- ①. Click "Message" to enter the community message interface.
- ②. You can view all information, personal information and community information, including fields such as serial number, information subject, date and whether to read or not
- ③. Click on a single item to view the specific information content.
- ④. You can delete a single message or delete all messages.

## 2.7 Monitor

### (1). Function description

You can select a specific door **station** for real-time monitoring.

### (2). User interface

### (3). Steps

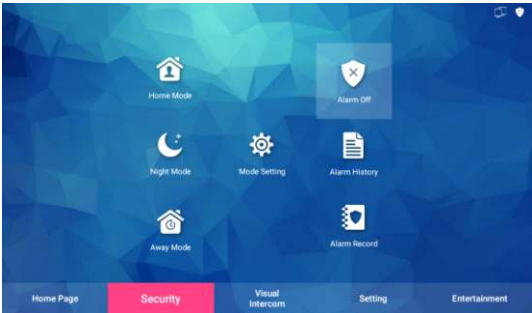

- ①. Click “Monitor” to enter the real-time monitoring door station interface;
- ②. The right side of the interface will display all the door stations that can be monitored, and the 01 number gate door is monitored by default.
- ③. You can freely click to select the door station you want to monitor for monitoring.

## 3 Security

### (1). Function description

The security module includes functions such as switching at home mode, night mode, away mode and alarm off, mode setting, alarm history and alarm record.

### (2). User interface

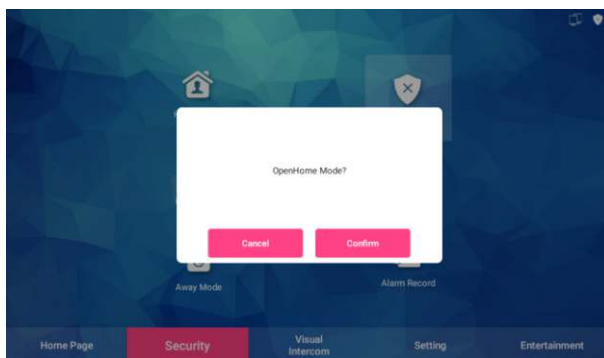

## 3.1 Home Mode

### (1). Function description

Click the “Home Mode” icon to confirm whether to turn on the Home Mode. By default, the arming delay is 30 seconds. After 30 seconds, it will prompt “mode has been activated”, and the security probe will enter the alert state after arming successfully.

### (2). User interface

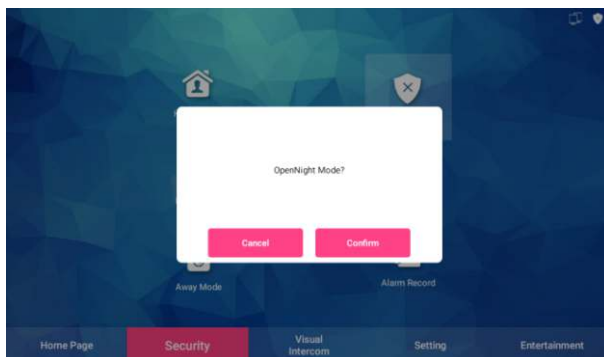

## 3.2 Night Mode

### (1). Function description

Click the “Night Mode” icon to confirm whether to turn on the night mode. By default, the arming delay is 30 seconds. After 30 seconds, it will prompt “mode has been activated”, and the security probe will enter the alert state after arming successfully.

### (2). User interface

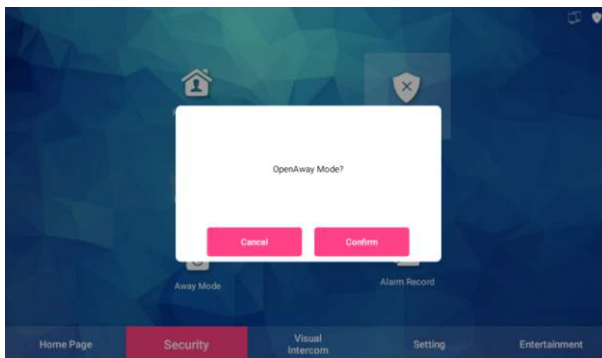

### 3.3 Away Mode

#### (1). Function description

Click the “away mode” icon to confirm whether to turn on the away from home mode. By default, the arming delay is 30 seconds. After 30 seconds, it will prompt “mode has been activated”, and the security probe will enter the alert state after arming successfully.

#### (2). User interface

### 3.4 Alarm Off

#### (1). Function description

Click the “Night Mode” icon to confirm whether to turn on the night mode. By default, the arming delay is 30 seconds. After 30 seconds, it will prompt “mode has been activated”, and the security probe will enter the alert state after arming successfully.

### 3.5 Mode Setting

#### (1). Function description

The options of each mode can be set in detail.

#### (2). User interface

### (3). Steps

Before setting, you need to open the required defense zone type in the defense zone setting in the system settings.

- ①. Click “Mode Settings” to enter the mode setting interface.
- ②. The arming delay time can be set for the three modes of “night mode, home mode, and away mode”.
- ③. The settings of the disarming password and the hijacking password of the disarming mode can be modified:
  - a. **Disarm password:** first enter the old password (factory default: 123456), then enter the new password and confirm the password, press the OK button to set or modify successfully.
  - b. **Holding password:** The method of setting and modifying the disarming password is the same, but the holding password cannot be the same as the disarming password. The factory default of the hijacked password is 654321.

## 3.6 Alarm History

### (1). Function description

You can view the alarm records that triggered the alarm, including fields such as serial number, area code, area name, type, and time, and you can delete a single or all alarm records.

### (2). User interface

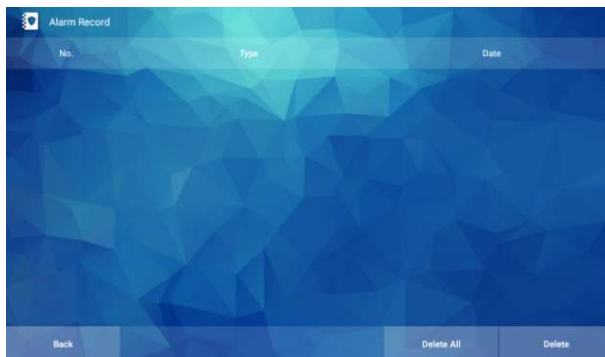

### 3.7 Alarm Record

#### (1). Function description

You can view the Alarm records for setting security, including fields such as serial number, type, and time, and you can delete a single or all security records.

#### (2). User interface

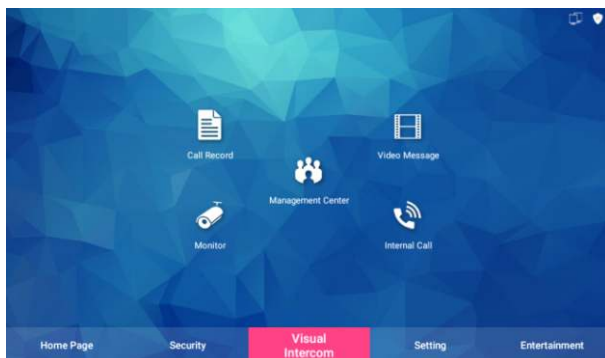

## 4 Visual Intercom

#### (1). Function description

The visual intercom module includes functions such as viewing call records, monitoring, management center, leaving a message, and household calls. For the introduction of monitoring, call center and household calls, please refer to point 1.

#### (2). User interface

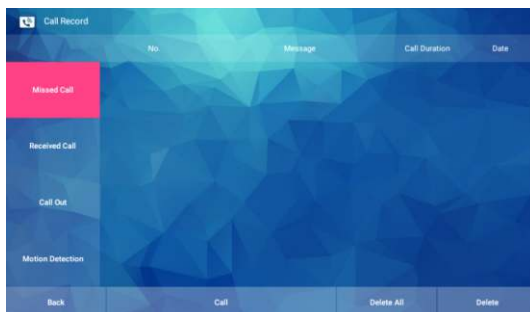

## 4.1 Call Record

### (1). Function description

Users can view the device call history.

### (2). User interface

### (3). Steps

- ①. You can view device call records, including missed calls, received calls and call out records;
- ②. Call records include fields such as device number, device location information, call duration and call date;
- ③. Select a single record and click “Call out now” to call the corresponding record device. Note: The indoor unit cannot call the door phone;
- ④. You can select a single record to delete, or delete all records.

## 4.2 Video Message

### (1). Function description

Users can view the missed calls of the device and the photo messages of visitors from the door station.

### (2). User interface

### (3). Steps

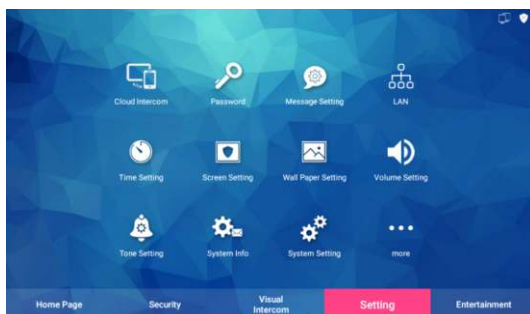

- ①. Click on the “video Message” interface to view the video message.
- ②. Click to select the video message you want to see on the right, a video will appear on the left, and click “Play” at the bottom to view the message;
- ③. Users can select a single video message to delete, or you can delete all video messages.

## 5 Setting

### (1). Function description

Including: Cloud intercom, password, message setting, LAN, time setting, etc.

### (2). User interface

## 5.1 Cloud Intercom

### (1). Function description

Activate and bind cloud intercom.

### (2). User interface

### (3). Steps

- ①. Download the “Tuya smart” app from the application market before starting to connect to the network settings, and IOS download the “Tuya smart” app from the APP store.
- ②. Open the APP to register an account, and pay attention to selecting the country and region when registering.
- ③. Log in to the APP after registration.

### Scan code connection steps:

- (1). Click the indoor monitor cloud intercom function, you need to connect the indoor unit to the network (WIFI or wired connection).

- (2). Open “TuyaSmart” app, click “add device” or “+” on upper right corner.

(3). Click the upper right corner to open the scan code function.

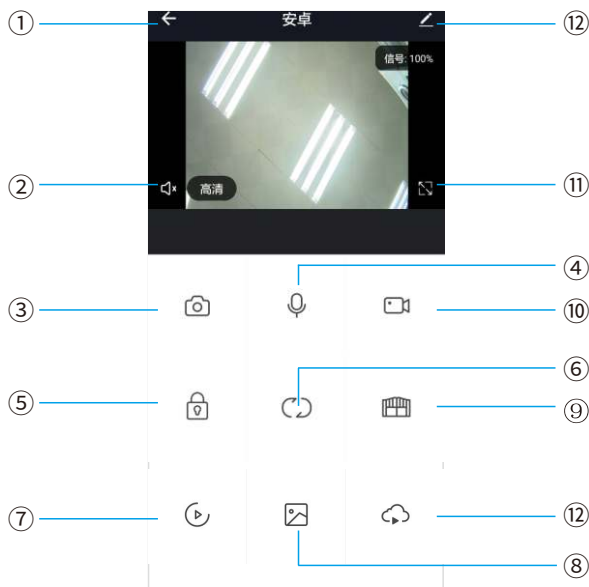

(4). After scanning the QR code on the indoor monitor, it will automatically jump to the connection screen.

(5). Wait for the progress to be 100% complete, and enter the following interface after the device is successfully added.

## APP Interface Introduction

- ① Hang up (back): exist the interface when press this icon while talking or monitoring.
- ② Speaker: Can hear the voice from outdoor station when turn on, and no voice when turn off. Can not talk while monitoring.
- ③ Picture snapshot: Can snapshot the images while talking or monitoring.
- ④ Micphone: Call panel calls and answered on smartphone, turn on this icon, the micphone is on, the voice can go to outdoor station. If not turned on, outdoor station cannot hear the voice from smartphone. This functions is invalid while monitoring.
- ⑤ Outdoor Unlock: Can unlock the lock connected to the call panel while talking or monitoring.
- ⑥ Channel switch: Can switch to monitor other call panels while talking or monitoring. Have 4 channels includes DOOR1, DOOR2, DOOR3, DOOR4, and matches to apartment system or high level system is NO.1 DOOR, NO.2 DOOR, NO.3 DOOR, NO.1 Villa, and matches to villa system is NO.1 Villa, NO. 2 Villa, NO.3 Villa, NO.4 Villa.
- ⑦ Play back: Click here for video play back when have SD card in the monitor and Recording function on APP is on.
- ⑧ Pictures: The snapshot pictures or recorded videos while talking or monitoring saved here. (only for Android smartphone, for IOS phone, it saved in Camera on smartphone.)
- ⑨ Monitor Unlock: Unlock the lock that connected to the indoor monitor while talking or monitoring. (only for the indoor monitor has monitor relay function).
- ⑩ Video Recording: Start record video while talking or monitoring.
- ⑪ Full Screen: display the image full screen.
- ⑫ Cloud storage: Value-added service video cloud storage privileges.
- ⑬ Setting

- a. The device name can be modified
- b. You can view the information of this device
- c. This function needs to be set externally
- d. In the basic function settings, the intercom mode can be selected as one-way intercom or two-way intercom (the default is one-way intercom)
- e. The infrared night vision function is automatic by default

Back 9Area 2 State Confirm

Click on the zone code to open the corresponding alarm zone and set the corresponding alarm zone.

## 5.11.6 Advanced configuration

### (1). Function description

Program the advanced configuration to the indoor unit, including whether to open the one-key call elevator and other functions.

### (2). User interface

### (3). Operation steps:

- ①. One-key call: After opening, a "one-key call" button will be added to the homepage, which can be operated and used
- ②. Villa advanced configuration: After opening, it will increase the call volume, ringing volume and motion detection sensitivity settings in the settings-more-villa settings
- ③. Video message: After turning on, the picture message received by the indoor unit is in the form of video
- ④. Visitor call recording: The indoor unit can record the call after turning on.
- ⑤. Priority to call the security device when calling the management center: After opening, it will call the security device first and then the management center
- ⑥. Home security: After opening, it can be armed and disarmed.
- ⑦. Smart home: After opening, the homepage will show the shortcut key function

- ⑧. Copy video data to external SD card
- ⑨. Tuya cloud intercom settings: click to manually enter Tuya's KEY and UUID
- ⑩. System type: Click to switch the system types including building, small high-rise, villa system
- ⑪. WIAN: WiFi function is enabled after it is turned on, and LAN function when it is not enabled
- ⑫. LOG: Choose whether to save log;
- ⑬. Test mode: Click to confirm and restart to enter the test mode.

### 5.11.7 Villa monitor settings

#### (1). Function description

To set various functions of the villa, need to set the system type to villa type to have this setting.

#### (2). User interface

#### (3). Operation steps:

- ①. Put villa door station and indoor monitor set under the same network segment, start the setting
- ②. After entering the villa number, the following settings can be made for villa number under that number
- ③. Set the unlocking delay: enter the delay time, click OK and the setting is successful
- ④. Set door sensor delay: enter the delay time, click OK and setting is successful
- ⑤. Set call volume, ring volume and motion detection sensitivity
- ⑥. Click "Get Configuration" in the lower right corner to get original settings of this villa door station

### 5.11.8 Multi-storey monitor parameter setting

#### (1). Function description

To set various functions of multi-storey monitor, you need to set system type to multi-storey type to have this setting.

#### (2). User interface

#### (3). Operation steps:

- ①. Put multi-storey and the indoor monitor to be set under the same network segment, start the setting
- ②. After entering the extension number, you can make the following settings for the villa under the room number;

- ③. Set the unlocking delay: enter the delay time, click OK and the setting is successful
- ④. Set door sensor delay: enter the delay time, click OK and setting is successful
- ⑤. Set the call volume and ringing volume; Click "Get Configuration" in the lower right corner to get the original settings of this villa machine

### 5.11.9 Parameter Setting of multi-storey door station

#### (1). Function description

To set various functions of multi-storey monitor, you need to set system type to multi-storey type to have this setting.

#### (2). User interface

### (3). Operation steps:

- ①. Put villa door station and indoor monitor set under the same network segment, start the setting
- ②. After entering the villa number, the following settings can be made for the villa number under that number
- ③. Set the unlocking delay: enter the delay time, click OK and the setting is successful
- ④. Set door sensor delay: enter the delay time, click OK and the setting is successful
- ⑤. Set the call volume, ring volume and motion detection sensitivity
- ⑥. Click "Get Configuration" in the lower right corner to get the original settings of this villa panel.

#### 5.11.10 Network camera
